

SumiDrill WDX Series

Rev.18

Balanced Design for Stable, High-Quality Drilling

**M Type Chipbreakers
for Stainless
Steel Machining
Now Available
(ACM300)**

Four chipbreaker types resolve chip issues

Five grades support machining from steel to stainless steel, cast iron, and non-ferrous metals

Proprietary coating technology improves wear and fracture resistance for long tool life

Four-cornered insert doubles as central and peripheral insert for economical use

Dia.	2D	ø13.0 to 68.0mm	4D	ø13.0 to 63.0mm
	3D	ø13.0 to 68.0mm	5D	ø13.0 to 55.0mm

General Features

The SumiDrill WDX type has excellent cutting balance that provides stable drilling on a wide range of work materials from general steel to stainless steel and aluminum alloy. Available in four original chipbreaker styles, the inserts feature improved chip evacuation and reduced cutting force for use in low-rigidity contexts.

Product Range

Drilling Depth	Dia. (mm)
2D P8	ø13.0 to ø68.0
3D P10	ø13.0 to ø68.0
4D P12	ø13.0 to ø63.0
5D P14	ø13.0 to ø55.0

Features and Applications

Balanced Design

Cutting force during drilling is balanced between central insert and peripheral insert. The relative position of each insert is optimised to provide stable drilling.

Excellent Chip Control

The chip evacuation direction can be controlled with the chip control groove at the centre of the breaker, enabling good chip evacuation.

Versatile Tool for a Variety of Machining Applications

Select among four types of chipbreakers for different applications, allowing optimal drilling for a variety of work materials and conditions.

Suitable for a wide range of applications including hole expansion, spot facing, external turning and internal boring.

Economical Four-Cornered Insert

This product has an extremely economical design where a single insert type can be used for the central insert or peripheral insert, with two corners for each position - a total of four corners.

Design
Cutting force of central insert $\approx$ that of peripheral insert

■ Cutting Performance

- **Balanced Design (Comparison of Horizontal Component Values)**
Balance is maintained at the through hole engagement and exit points, and drilling is stable.

- **Improved chip control**

Tool : WDX 200D3S25 ($\phi 20.0$)
Work Material : SUS304
Cutting Conditions: $v_c = 130\text{m/min}$, $f = 0.06\text{mm/rev}$
 $H = 50\text{mm}$, Wet

- **Finishing is easy because the hole bottom is almost flat.**

Bottom of hole after drilling with WDX200D3S25

Bottom of hole after drilling with conventional tool ($\phi 20$)

M Type Chipbreaker for *New* Stainless Steel Machining + ACM300 Grade

Newly developed M Type chipbreaker for stainless steel achieves stable hole quality through chip control.

Tool	WDX Type M Type + ACM300	WDX Type G Type + ACP300	Competitor's Product For Stainless Steel Machining
Hole Quality			
Chip			

Tool : WDX200D3S25
Insert : WDXTO63006-M (ACM300)
Work Material : SUS316L
Cutting Conditions: $v_c = 150\text{m/min}$, $f = 0.08\text{mm/rev}$
 $H = 60\text{mm}$ Wet

For High-speed Drilling of Steel and Cast Iron ACP100

Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine crystal grain coating layer of the Super FF Coat achieved through our proprietary technology.

Drills for Deep Hole Drilling L/D=5 (In stock from ø13.0 to ø55.0 mm)

■ Features

The WDX Type for 5D drilling features a specially designed flute shape and large coolant hole for excellent chip evacuation even during deep hole drilling.

Large coolant hole

Coolant supply guide

Special Flute Shape for L/D=5

Tool Holder Features	Cross Section	Cutting Force	Machined Surface (Exit)
WDX 260D5S32 Special Flute Shape for L/D=5 * Designed with emphasis on chip evacuation Expanded flute design improves chip evacuation for stable drilling performance even with holes up to 5 L/D.		Amplitude in the thrust direction is larger than flutes designed for up to 4 L/D, but drilling performance is stable even when drilling deep holes of 5 L/D. Thrust Horizontal Component of Force Depth of Cut L/D = 4 Depth of Cut L/D = 5	Good machined surface down to end of hole
Comparison Tool Flute Shape for L/D=4 * Designed with emphasis on drill rigidity Flute design enables greater rigidity of the drill, achieving stable drilling of shallow holes up to 4 L/D.		Chip blockage at bottom of hole However, stable drilling up to 4 L/D Strong rigidity allows only minute amplitude in the thrust direction Depth of Cut L/D = 4 Depth of Cut L/D = 5	Poor machined surface due to chip blockage at bottom of hole (near 5 L/D)

Work Material: SUS304 Tool: WDX260D5S32 Insert: WDX-T 073506-G

Cutting Conditions: $v_c = 150\text{m/min}$ $f = 0.05\text{mm/rev}$ $H = 130\text{mm}$ (Through Hole) Wet

WDX Type Good performance in terms of both machined surface and hole diameter 	Hole Dia. (mm) Entrance Exit	Competitor's Product A 	Hole Dia. (mm) Entrance Exit
Work Material: Machine Component (SCM415) Tool: WDX200D5S25 Insert: WDX-T063006-G (ACP300) Cutting Conditions: $v_c = 185\text{m/min}$ $f = 0.12\text{mm/rev}$ $H = 87\text{mm}$ (Through Hole) Wet			
· Good machined surface · Consistent drilled diameter			

WDX Type Normal wear 	Competitor's Product B Corner chipping, rake face wear
Work Material: Tractor Link (35MnBM) Tool: WDX205D5S25 Insert: WDX-T063006-G (ACP300) Cutting Conditions: $v_c = 100\text{m/min}$ $f = 0.11\text{mm/rev}$ $H = 60\text{mm}$ (Through Hole) Wet	
· Achieves steady drilling even at L/D=5 · Reduces insert chipping and wear for stable tool life	

WDX Type Normal wear 	Competitor's Product C Corner chipping
Work Material: Bearing for Wind Power Generator (42CrMo) Tool: WDX330D5S40 Insert: WDX-T094008-L (ACP300) Cutting Conditions: $v_c = 146\text{m/min}$ $f = 0.10\text{mm/rev}$ $H = 158\text{mm}$ (Through Hole) Wet	
· Eliminates defects in workpieces caused by insert chipping!	

CVD grade with superior wear resistance ACP100

Coating Features

C Super FF Coat (CVD: Chemical Vapor Deposition) **ACP100**

Characteristics of the Coating Layer

Provides excellent wear resistance and high reliability thanks to our coating stress control technology and the ultra-fine crystal grain coating layer of the Super FF Coat achieved through our proprietary CVD process technology

PVD grades with superior fracture resistance ACP300/ACM300/ACK300

P New Super ZX Coat (PVD: Physical Vapor Deposition) **ACP300** **ACM300** **ACK300**

Characteristics of the Coating Layer

Employs our super multi-layered New Super ZX Coat, which utilises our proprietary thin-layer coating technology and advanced nanotechnology. The coating consists of thousands of alternating, nanometre-thin (1 nanometre = 1 billionth of a metre) layers.

Grade for Non-Ferrous Metal Machining AURORA Coat (DLC) DL1500

DL1500 grade for non-ferrous metal machining offers greatly improved adhesion resistance compared to conventional tools.

Ideal for drilling copper alloys as well as aluminum alloys.

2nd Recommendation

P Steel

For Low Feed with Chip Evacuation

L Type ACP300

- For drilling of SS400, SCM415, SCM420, etc.
- High speed and low feed is recommended if there are issues with chip control
- Decrease the feed if vibration occurs due to burnt chips

P Steel

General-purpose

G Type ACP100

- For drilling of general steel and alloy steel, when prone to significantly large flank wear

P Steel

For Low Feed with Chip Evacuation

L Type ACP100

- For low-feed conditions

P Steel

Strong Edged

H Type ACP300

- For drilling with interruptions (entry/through) due to slanted entry, reduce the feed rate in the interrupted area (around $f = 0.05\text{mm/rev}$)
- For insufficient cutting edge strength due to drilling of hardened steel (heat treated)

P Steel Improved chip control (low carbon steel, etc.)

P Steel Insufficient wear resistance

P Steel Initial chipping measures (interruption, high hardness, etc.)

1st Recommendation

General-purpose

G Type

P Steel For general steel and alloy steel drilling
ACP300

K Cast Iron For cast iron drilling
ACK300

N Non-Ferrous Metal For non-ferrous metal drilling
DL1500

M Stainless Steel For stainless steel drilling
ACM300

Stainless Steel

M Type *New*

K Cast Iron Insufficient wear resistance (high-speed drilling)

K Cast Iron Initial chipping measures (interruption, high feed, etc.)

M Stainless Steel Lack of chip evacuation (extension)

2nd Recommendation

K Cast Iron

General-purpose

G Type ACP100

- When heavy flank wear occurs in cast iron drilling
- To limit wear in high-speed, low to medium feed conditions

K Cast Iron

Strong Edged

H Type ACK300

- When interrupted drilling is performed due to slanted entry, etc. as with steel drilling
- For insufficient cutting edge strength due to high-feed drilling

M Stainless Steel

General-purpose

G Type ACP300

- When chips extend and clog

*ACP100 is the first recommendation for steel with a hardness of 200HB or greater, or for high-speed drilling of steel.

MEMO

Drilling tolerance: -0.05 to +0.15mm

*For h7 tolerance, refer to the General Catalogue.

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation. In that case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (f) to 75% of the figures in the table above.

● mark: Standard stocked item ● mark: Standard stocked item (expanded item) Blank: Made-to-order item

Drilling tolerance: 0 to +0.20mm

*For h7 tolerance, refer to the General Catalogue.

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation. In that case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (f) to 75% of the figures in the table above.

● mark: Standard stocked item ● mark: Standard stocked item (expanded item) Blank: Made-to-order item

Drilling tolerance: 0 to +0.25mm

*For h7 tolerance, refer to the General Catalogue.

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation. In that case, it is recommended to set the cutting speed (V_c) to 130% and the feed rate (f) to 75% of the figures in the table above.

For the P and K grades for which ACP300 and ACK300 inserts are the first recommendation, ACP100 inserts are the second recommendation. In that case, it is recommended to set the cutting speed (v_c) to 130% and the feed rate (f) to 75% of the figures in the table above.

■ Lathe Drilling Guidelines

Fig. 1

Fig. 2

■ Drill Mounting

- Set the drill so that the peripheral insert is parallel to the X-axis of the machine. (Fig.1)
- Press the end of the flange of the drill tightly against the face of the holder before tightening the bolt.

■ Adjusting Work Diameter (Offset)

- The work diameter is adjustable by moving the machine X-axis.
- Make the adjustment by moving in the positive direction of the X-axis (enlarging the bore diameter). Moving the X-axis in the negative direction (to reduce the bore diameter) is not recommended as the holder may interfere with the hole. (See Fig. 1)
- The maximum allowable adjustment (offset) differs depending on the diameter.
Refer to Radial Offset (Max) in the body dimension tables on pages P8 to P14.

■ Other Notes

- When the drill is mounted on a lathe, the centre of the central insert is designed to be 0.15 to 0.2mm below the centre of the spindle.
- If the spindle deviates so far off centre that the centre of the central insert lies above the spindle centre, the central insert will break.
- Set the depth of cut for external turning or internal boring work to 1/5 or less of the drill diameter (max. 5mm or less). (Example: Set depth of cut to 4mm or less for diameter of $\phi 20\text{mm}$)
- Install a cover to prevent injury from possible chip fly-out (see disc-shaped chip in Figure 2) when through boring on a lathe. If your equipment has no cover, attach a cover or similar part for your safety.

■ Typical Power Ratings

<CAUTIONS>

- Power ratings are subject to change based on conditions such as work material and cutting speed, and should only be used for reference.
- Cutting Conditions (Reference)
Work Material: S50C (230HB)
Cutting Speed: $v_c=150\text{m/min}$

■ Typical Coolant Volume

<CAUTIONS>

- Coolant volume is a factor that affects drilling performance, particularly with respect to chip evacuation and lubricity. This is particularly important for chip evacuation and lubricity.
- Coolant pressure should be set higher for small drills. ($\phi 18.0\text{mm}$ or smaller)
- Coolant volume is usually adjusted by changing the coolant pressure provided on most CNC machine tools.
- This table provides guideline values only. More coolant may be required depending on the machine, coolant and work material.

■ Precautions for Attaching and Removing Inserts

- Before mounting the insert, remove all traces of foreign matter on the insert seat surface using air or other means.
- When using the wrench, align it to the axis of the screw and press while turning. (See Fig. 3) If the wrench is not aligned with the screw, the insert will be insufficiently clamped and the tip of the wrench and/or the Torx hole of the screw may become deformed.
- Do not allow clearance between the insert seat and drill when mounting the insert. (Fig. 4, Part A) Figure 4 shows a properly mounted insert.

* It is normal for the outer sides of the central insert to have clearance because it is clamped at its centre and pushed to the rear.

Fig. 3

Fig. 4

■ Troubleshooting

Problem	Symptom	Cause	Countermeasures
Too much variation in hole diameter	Drilled hole diameter is larger than desired	· Deflection of the holder due to high thrust force	· Decrease the feed rate to decrease the thrust force. · Make an adjustment on the X-axis.
	Drilled hole diameter is smaller than desired	· The cutting edge backs off and does not enter the workpiece	· Increase the feed rate. · Make an adjustment on the X-axis.
	Significant difference in hole diameter at entrance and bottom	· Chip clogging	· Increase the feed rate to improve chip evacuation. · Use an L type chipbreaker for chip control.
Poor quality machined hole surface	Poor machined surface from entrance to bottom of hole	· High cutting force · Low rigidity of workpiece	· Decrease the feed rate. · Review tooling to improve rigidity.
	Poor machined surface at bottom of hole	· Machined surfaces damaged by chips	· Increase the feed rate to improve chip evacuation. · Use an L type chipbreaker for chip control.
Insert is broken	Breakage on central insert (centre)	· Improper adjustment of centre height · Insert is not strong enough	· Check the centre height again. · If the drill is being used on a lathe, try flipping the drill 180°. · Use a strong edged chipbreaker (H type).
	Breakage on peripheral insert	· High cutting load in cutting edge	· Decrease the feed rate to decrease cutting load. · Use a strong edged chipbreaker (H type).

Eccentric Sleeve for WDX series

Diameter Adjustment Range indicates the range in which the diameter can be adjusted.

The dedicated Eccentric Sleeve WAS Type for the SumiDrill WDX Type provides $\pm 0.3\text{mm}$ of adjustment when drilling holes.

■ Precautions for Use

1. The dial is for reference purposes. Always measure the actual work diameter and adjust accordingly.
2. Not usable with collet chuck type holders.
Use a side-locking type holder.
3. Use this product under high-rigidity conditions.
This product is not recommended for deep hole drilling such as 5D and low-rigidity conditions.

Application Examples

MEMO

SumiDrill WDX series Made-To-Order Request Sheet

Select a cutter design and enter the dimensions in the table below.

After completion, send the sheet to our nearest sales office or distributor.

Feel free to contact us for other shapes or dimensions or with other requests.

Company Name/Contact

■ Drill Shape

SumiDrill WDX series

SumiDrill WDX series with Chamfer Edge

• Chamfer width is restricted by the diameter (DC) and chamfer angle (θ).

SumiDrill WDX series with Spot Facing Edge

• Spot facing diameter (DC2) is restricted by the diameter (DC).

■ Shank Shape

Cylindrical

Side Lock Flat

Whistle Notch

■ Compatible Inserts

For Drilling / Spot Facing (WDXT Type)

For Chamfering (TP □□ Type)

DC [Diameter] ø13 to ø55mm

mm

DCON (*) [Shank Diameter] ø20 to ø40mm

mm

DC2 [Spot Facing Diameter DC + 2 to DC + 20mm]

mm

LUX [Neck Length] DC × 4 or less

mm

LPR (*) [Overhang Length] 200mm or less

mm

L5 [Chamfer Width] 3mm or less

mm

LUX + L6 [Neck Length + Spot Facing Depth] DC × 4 or less

mm

θ (*) [Chamfer Angle] 15 to 60°

°

(*) Note that dimensions are restricted.

Other Requests

• Very hot or lengthy chips may be discharged while the machine is in operation. Therefore, machine guards, safety goggles or other protective covers must be used. Fire safety precautions must also be considered.

<SAFETY NOTES>

• Please handle with care as this product has sharp edges.
• Improper cutting conditions or mis-handling of the tool may result in breakages or projectiles. Therefore, please use the tool within its recommended conditions.

• When using non-water soluble cutting oil, precautions Against fire must be taken and please ensure that a fire extinguisher is placed near the machine.
